Under-Rack Mobile Storage System

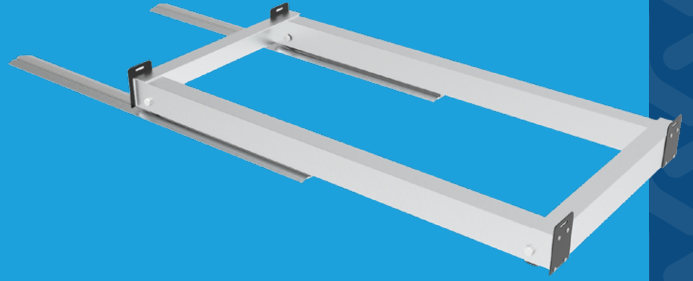

Pipp Mobile, the leader in mobile storage solutions and space optimization, is proud to introduce its latest innovation, the **Under-Rack Mobile Storage System**. This system installs seamlessly beneath your existing warehouse or back-of-house heavy-duty racking system. The shelving pulls forward from underneath the static racking with a unique track and wheel design, minimizing the length of track required to move the base. This design utilizes the main aisle as a temporary access point for retrieving stored products. By reclaiming the underutilized space beneath static racks, this solution optimizes your square footage, making it easier to organize and access smaller goods that can be difficult to manage.

This solution features **floor-mounted tracks** discreetly installed beneath the existing racking system, ensuring they remain hidden and never obstruct the aisle. A durable urethane front wheel glides smoothly along the flooring while the concealed track acts as a guide, maintaining **precise alignment and stability**. The under-rack shelving is easily pulled out for inventory retrieval and effortlessly pushed back into place, offering a seamless and efficient storage experience.

Make it Mobile

Pipp's mobile carriages maximize your storage space by creating a movable aisle that allows you to easily access and organize your products. The Under-Rack Mobile Storage System utilizes Pipp's **Heavy-Duty Manual Carriage** on a **Flat Track System**. This carriage can handle loads per unit of up to 3,000 lbs. The track system is ADA Compliant and Anti-Tip features are available for carriages in Seismic Zones.

Maximize Your Space

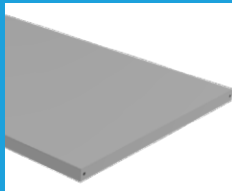

The Under-Rack Mobile Storage System features **Rivet Style Shelving** on the mobile base. This shelving combines easy assembly with structural integrity, making it a reliable commercial shelving solution. Each shelf has a weight capacity of **400 - 600 lbs.** (based on size) and can be adjusted in **1-1/2" increments** for optimal flexibility, allowing for endless configurations that can be easily changed at any time.

Shelf Decking

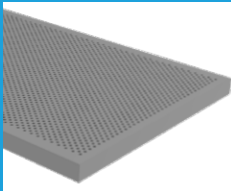

Various shelf decking options are available to meet any application or code requirements.

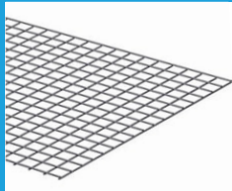

Particle Board

Solid Metal

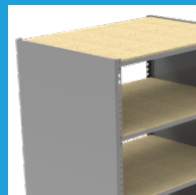

Perforated Metal

Wire Grid

End Panels

While not required, a variety of paneling options are available for the front of the shelving units.

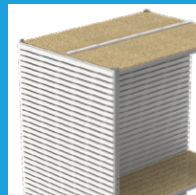

Solid Metal

Wire Grid

Peg Board

Slat Wall

Clear Acrylic

Laminated
